PROFESSIONAL SUMMARY

Game Engineer with 5+ years of experience shipping commercial titles across PC, consoles, and mobile, including AAA and licensed IP productions. Specialized in gameplay engineering, multiplayer systems, and cross-platform performance optimization. Strong expertise in Unreal Engine 5 (C++, Gameplay Ability System, AI, Common UI) and Unity (C#, DOTS/ECS, Addressables), with experience developing large-scale live-service games, platform integrations, backend-connected systems, and data-driven architectures.

EXPERIENCE

Globant **Remote**
Game Engineer *January 2026 - Present*

- Contributed to the development of The Sims as part of a Globant outsourcing team supporting Electronic Arts (EA).
- Developed new gameplay features using Python, C++, and data-driven tuning systems within a large-scale proprietary AAA game engine.
- Worked within a mature multi-language codebase, extending existing systems while maintaining long-term stability, compatibility, and content integration.

Big Moxi Games **Remote**
Unreal Game Engineer *March 2024 - December 2025*

- Architected and implemented multiplayer replication and session systems using the Unreal Gameplay Ability System (GAS).
- Optimized large-scale AI for real-time combat scenarios, improving frame stability by 20%.
- Established a scalable, data-driven architecture by applying MVVM principles and Common UI.

Unli Games **Remote**
Unity Game Engineer *November 2023 - February 2024*

- Designed and implemented deterministic multiplayer using Photon Quantum to achieve frame-accurate sync for competitive gameplay.
- Integrated PlayFab and Azure backend services with runtime asset management for cross-platform compatibility.
- Improved performance by optimizing asynchronous systems and developing highly modular UI.
- Took an active role in architecture decisions, demonstrating leadership in shaping technical solutions.

Flux Games **Remote**
Unity Game Engineer *November 2022 - November 2023*

- Developed and shipped modular gameplay systems, including complex branching quest flows and multi-phase boss fights.
- Refactored a significant portion of legacy code, improving stability and reducing crash rates across core game loops.

Mantra Filmes **Remote**
Unity Game Engineer *December 2021 - March 2023*

- Re-architected core game systems, refactoring the previous tightly coupled code structure into a maintainable design, significantly reducing critical bug resolution time.
- Implemented Addressables and procedural animation to reduce load and memory use.
- Led AI and persistence system development for Steam title with cloud saves.
- Built editor tools and automated workflows to speed up iteration.

Z3 Studio **Remote**
Unity Mobile Game Engineer *June 2021 - August 2021*
- Developed core gameplay features while optimizing mobile builds using Object Pooling for better memory management and performance.

EDUCATION

Federal University of Vales do Jequitinhonha e Mucuri **Diamantina, MG**
Information Systems, Bachelor (ongoing) *2023 - 2027*

VOLUNTEER WORK

- Hackathon Organizer & Coordinator - UaiDev Tech Event — October 2024
- Game Dev Project Mentor - ByteBuilders Academic League — May 2024 - Present
- Educational Content Creator - Idea.ToGame on YouTube — August 2020 - Present
- President - ByteBuilders Academic League — April 2023 - Present
- Academic Director - ByteBuilders Academic League — May 2023 - April 2025

SKILLS

Programming Languages
- C++, C#, Blueprint, Java, JavaScript, Python.

Game Engines
- Unreal Engine 5 (Gameplay Ability System (GAS), Common UI, Enhanced Input), Unity (Universal Render Pipeline (URP), Photon Quantum, Addressables, Custom Editor Tools).

Networking & Backend
- PlayFab, Azure, Steamworks, Photon, REST APIs, SQL.

Architecture & Patterns
- Object Oriented Programming (OOP), SOLID, MVVM, Clean Architecture, Data-Driven Design (DDD), Entity Component System (ECS).

AI & Gameplay Systems
- Behavior Trees (BT), Finite State Machine (FSM), Goal Oriented Action Planning (GOAP), A*, Steering Behaviors.

Optimization & Tools
- Profiling, Object Pooling, Memory Management, Async Systems, Test Driven Development (TDD), Data Oriented Technology Stack (DOTS).
